

Mini Project SRS

Project Title: Department Expense Approval System

1. Project Objective

Build a finance-domain web application where employees can submit expense claims and the finance team can review, approve, reject, and monitor department-wise monthly budget usage.

The application must help the company track expenses, control spending, and view the financial status of each department for a selected month.

2. Technology Scope

The project must be developed using:

- Java
 - Spring Boot
 - MySQL
 - ReactJS
 - AI tool: Claude or GPT
-

3. Project Duration

The project must be completed within **4 hours**.

4. Users

The system will have two user types:

1. Employee
2. Finance Manager

Authentication is not required.

5. Functional Requirements

FR-1: Expense Claim Submission

An employee should be able to submit an expense claim.

Each claim must include:

- Employee name
- Department
- Expense category
- Amount
- Expense date
- Description
- Claim status

A newly submitted claim must have the status Pending.

FR-2: Expense Claim Review

The Finance Manager should be able to review all submitted claims.

The Finance Manager should be able to:

- Approve a pending claim
- Reject a pending claim
- Add a review remark

Once a claim is approved or rejected, its final status should be clearly visible.

FR-3: Department Budget Management

The system should allow monthly budget amounts to be maintained for departments.

Each department can have only one budget for a particular month and year.

FR-4: Budget Control

The system should not allow approval of a claim if the approval causes the department's monthly budget to be exceeded.

Rejected claims should not affect budget usage.

Pending claims should be visible separately from approved expenses.

FR-5: Expense Tracking

The system should allow users to view expense claims based on:

- Department
 - Month and year
 - Claim status
 - Expense category
-

FR-6: Monthly Finance Summary

The system should show a monthly financial summary for each department.

The summary must include:

- Monthly budget
 - Total approved expense
 - Total pending expense
 - Remaining budget
 - Number of pending claims
 - Number of approved claims
 - Number of rejected claims
-

6. Validation Rules

The system must ensure that:

- Expense amount is greater than zero
 - Department is required
 - Expense category is required
 - Expense date is required
 - Monthly budget amount is greater than zero
 - Duplicate department budget for the same month and year is not allowed
 - Only pending claims can be approved or rejected
-

7. Expected Screens

The application should contain screens for:

1. Expense claim submission
 2. Expense claim listing and filtering
 3. Claim review
 4. Department budget management
 5. Monthly finance summary
-

8. Expected Deliverables

Each trainee must submit:

1. Backend source code
 2. Frontend source code
 3. Database setup details
 4. Working application screenshots
 5. README file
 6. AI usage log
-

9. Out of Scope

The following features are not required:

- Login and registration
 - JWT security
 - Email notifications
 - Payment gateway
 - File upload
 - Advanced analytics
 - Charts and graphs
 - Multi-branch finance workflow
-

10. Acceptance Criteria

The project will be considered complete if:

- Employees can submit expense claims
- Finance Manager can approve and reject pending claims
- Department-wise monthly budget can be maintained
- Claims cannot be approved beyond available department budget

- Monthly summary shows correct budget and expense information
- Filters work correctly
- Basic validation and error handling are present
- Frontend and backend are integrated
- The trainee can explain the project flow, logic, and AI usage clearly
